Description:

I am generally a fan of Terry Pratchett's work and loved the preceding merging of a Discworld story with basic scientific explanations. Sadly, as

interesting as elements of the science chapters were, they became horribly tedious, rambling, and repetitive even before they got to the section on Judaism. Like many assimilated Jews, they regard Judaism with an intense and deeply irrational paranoia. Before I continue, I should point out that I am in no way related to Jews or an adherent to Judaism. I just think that many Jews fail to understand Judaism in its intellectual and historical context. As fascinating as a short story about a scientist using logic circuits to evolve a more advanced means of replicating a signal, the section on Pan Narrans deviated from a discussion of humans advancing by telling stories (an idea I am intrigued by as a student of History) and into a lengthy and frequently absurd complaint against Judaism. I think much if has to do with Mr. Cohen. I seriously doubt any similar complaints would be issued against Bhaal, Marduk, or Jupiter. The general gist of the complaints were that Judaism stifled creativity, repressed peoples spirits, was horribly legalistic, and led to religious wars. Given that the authors, like Mr. Pratchett, are atheists, these are likely key elements of their generalized view of all religion. As a student of History (as I do not have a PhD or a specialized job, I cannot call myself a historian), I know that the various religions in the past (not to mention present) were very different. Not least of these differences was human sacrifice. Almost every society in human history has practiced human sacrifice as a legitimate means of honoring or bartering with the gods. Judaism (and the Romans for different reasons) was radically different. People have supposed that Abraham was confused why God told him to sacrifice his son. He couldn't have been because that was NORMAL procedure among neighboring peoples. Given that Judaism prohibited human sacrifice, prostitution, and sexual slavery, I consider Judaism to have been a most favorable development in human history. Nonetheless, Mr. Cohen seemed infuriated when an Israeli asked what it must have been like to be a descendant of the Cohens (an ancient religious caste in Hebrew society that still provided most of the rabbis and religious leaders even in the 1800s). Mr. Cohens response was one of great shame at what his ancestors must have done in condemning other people and generally being repressive. The only real grounds I can find for such a view exist not in classical history (when the Cohens really existed as a religious office) but in the sometimes insular world of the Polish shtetl where some Jewish communities were dominated by charismatic rabbis with more influence than sense. Even still, others shtetles had more reasonable rabbis who did not threaten to cast people out for disagreeing. I suspect that Mr. Cohen is unreasonably conflating the two periods in his mind and fails to understand the moral philosophy of Judaism. One of the excellent points made in the book (or is it the earlier book?) is that under polytheism, you needed a theopsychologist to understand the weather. Monotheists just needed a regular observation of the weather because they assumed some continuity in natural laws. There are wonderful elements in the book. The idea of Pan Narrans is interesting (although like many people excited by their ideas, they go too far and assume it explains everything) and is worth considering. Many smaller lessons such as the process of evolution and the nature of life is portrayed in a wonderfully simple and easy to understand manner. The book outside of Pan Narrans and Mr. Cohens rant is a good and worthwhile read. I would have given it four stars had it not been for the repetitiveness of their Pan Narrans idea and the historically absurd accusations against Judaism.
